

Project Name: Create a minimal store system

Project Planning -

The full system will have 3 panels. Panel wise responsibility is given below.

Employee Panel :

- Employee can create requisition
- Requisition form will contain
 - ◆ Choosing multiple item
 - ◆ Item Wise quantity
- See the list of requisition & approve/reject the requisition

Admin Panel:

- Items CRUD
- Suppliers CRUD
- See stock list
- See requisition list and approve/reject requisition

Stock Executive

- Receiving items from suppliers and creating/updating stock using a single form.
- The form will contain
 - ◆ Select Supplier
 - ◆ Select Item
 - ◆ Priice
 - ◆ Quantity
- Each time a stock executive receives an item, a new stock will be created with new quantity and new price. Even if the item was stocked previously, a new stock will be created if the item is from a different supplier/different price. The stock will be updated when we need to update the quantity of the previously added stock.
- See the stock list & sort it by quantity & price
- Issue the item and update stock according to the requisition using FIFO method.

*** Please correct me if I have misunderstood aything.
